SINGAPORE PERMANENT RESIDENT

Senior Specialist Solutions Architect at AWS covering End User Messaging and Amazon SES across Asia Pacific. Twelve years across communications, CPaaS, and SaaS, seven of them in customer-facing solutions engineering and architecture, built on a foundation of backend and infrastructure software engineering. I own the technical relationship end to end: architecture reviews with platform teams, business framing with executive sponsors, and the reference implementation that proves the design works. Eight published posts on the official AWS Messaging Blog, each shipping with an open-source repository that field teams reuse.

EXPERIENCE

Senior Specialist Solutions Architect, End User Messaging & SES · Amazon Web Services

Nov 2024 – Present

Singapore · Asia Pacific coverage

- **Specialist SA aligned to the Communication Developer Services go-to-market team**, engaged on 29 opportunities across Australia and New Zealand, ASEAN, and Japan in the first half of 2026 alone.
- **Published eight posts on the AWS Messaging Blog, lead author on five**, each with an accompanying open-source reference repository now reused by field teams across Asia Pacific and Greater China.
- **Lead specialist on enterprise migrations** onto SES and End User Messaging from competing providers: international number registration and portability, dedicated IP warm-up, per-tenant reputation isolation, suppression and deliverability strategy, block-list management at hundreds of millions of messages per month.
- **Built agentic AI reference architectures** pairing End User Messaging with Amazon Bedrock agents and knowledge bases for ecommerce and financial services, adopted by teams beyond my own region and folded into the regional sales play.
- **Use Claude Code on Amazon Bedrock daily**, and built a library of skills and repeatable workflows so the same automation is available to the whole team rather than one terminal.
- **Built the CPaaS news digest the GTM and SA team runs on**, an automated competitive intelligence feed, alongside a positioning portal and an RFP knowledge base.
- **Regional escalation point** for both services, resolving 85+ technical specification requests and L200 to L400 technical inquiries.

Senior Sales Engineer · 8x8

Aug 2023 – Nov 2024

Singapore

- Achieved 100% of regional quota in Q4 2024.
- **Built the CPaaS technical demo platform** used by the regional sales team in live customer meetings. React, Next.js, Node.js, and Python, containerized with Docker on AWS EC2, covering the SMS, Messaging Apps, Voice Callflows, and Verification APIs with embedded video conferencing.
- **Recorded 31 product demonstrations for the 8x8 developer channel**, roughly 11,000 combined views, spanning CRM integrations (Salesforce, Zendesk, Freshdesk, Okta), the Voice Callflows API, and video.
- **Wrote the accompanying product documentation** as a technical writer on the side, covering the SMS, WhatsApp, RCS, Viber, and LINE channels plus the Verification and Automation Builder services.
- Received the 8x8 Employee Appreciation Award for the work above.

Senior Sales Engineer · GuardRails

Nov 2022 – Aug 2023

Singapore

- **Founded the sales engineering practice** at an early-stage application security company, reporting directly to the CEO and CTO with no playbook to inherit.
- Ran technical evaluations and security reviews with CISOs and enterprise security teams through full enterprise buying cycles.
- Led on-premise Kubernetes deployments across AWS, GCP, and Azure for customers with data residency and air-gap requirements.

Principal Solutions Engineer · Twilio

Jun 2020 – Sep 2022

Singapore

- **Top APAC Solutions Engineer for Q2 2021 at over 400% of quota**, promoted out of cycle from Senior to Principal.
- Won the H1 2020 Transformative Deal Award, given that half to the largest Twilio Video engagement in the region.
- Second place in Twilio's 2021 SE hackathon for a real-time transcription and translation demo over live video conferencing.

Software Engineer, then Solutions Engineer · Sendbird

Jun 2018 – Jun 2020

Singapore

- **Joined the Y Combinator-backed chat infrastructure company as roughly its 30th employee**, before the rounds that took it past \$100M raised and into unicorn territory.
- Owned technical engagements with major APAC enterprise accounts while contributing to the core backend platform and AWS infrastructure.
- Built a live-migration service on AWS Lambda, Aurora, and S3 that moved customer chat history without downtime.

Senior Software Engineer, Data & Infrastructure · Big Fish Games

Nov 2017 – Jun 2018

Seattle

- Stood up a Hive and Spark cluster on AWS EMR for game telemetry ingestion, with Python transformation jobs feeding the analytics pipeline.

Software Engineer, Platform · Rakuten

Jul 2016 – Oct 2017

Tokyo

- Built an internal distributed computing platform on Docker, Marathon, and Apache Mesos, running the microservices API layer on Nginx and Consul.

Software Engineer · Avery Products Corporation, then Panasonic Avionics

Apr 2014 – Jul 2016

California

- Java applications for online customized label design, and Linux test tooling for in-flight entertainment hardware.
